

Intern

Company Description

Vivtex is a fast-paced pre-clinical stage biotech company located in Boston, MA and Schlieren, ZH. We strive to transform oral drug delivery using a revolutionary proprietary technology (developed in the laboratory of Professor Robert Langer at MIT) that enables high throughput screening with fully intact and functional GI tissue. We are a tight-knit interdisciplinary team that develops better and safer oral therapeutics in close collaboration with major global pharmaceutical companies.

Internship Description

We are currently seeking highly motivated and enthusiastic interns for the Spring 2026 semester to contribute to the R&D program at Vivtex. This is a fantastic opportunity for local students interested in gaining valuable hands-on experience in a collaborative research and development setting.

Responsibilities:

- Prepare reagents and buffer solutions for experiments.
- Conduct tissue dissection procedures for in vitro studies.
- Provide experimental support to screening team as needed.
- Maintain and complete accurate laboratory notebook.
- Provide support for the laboratory and waste management.

Ideal Candidates:

- Currently enrolled in an undergraduate degree program in Biomedical Engineering, Biochemistry, Chemistry, Pharmaceutical Sciences, or related fields at a university local to Schlieren, ZH.
- Must be available from 8 AM to 4 PM on Mondays and Wednesdays.
- Excellent organizational skills and attention to detail.
- Excellent documentation skills.

- Must have good interpersonal skills and ability to perform as a team member.
- This part-time position is on-site and requires a 3-month minimum commitment.

The internship is based in Schlieren, ZH. Successful candidates will receive a competitive wage.
